Special classes on statistics and graphical techniques are crucial as they enhance analytical skills, enabling individuals to interpret and communicate data effectively. These classes provide practical tools for decision making, helping in various fields such as business, research and healthcare. Understanding statistical methods and graphical techniques empowers individual to make informed decision based on data fostering data driven mind set in problem solving.

As per CU CBCS syllabus students of 6th Semester had to undertake statistical techniques as one of their SEC papers. It included topics like frequency distribution, graphical techniques (pie chart, histogram, bar graph, less and more than ogive), and central tendency. As descriptive statistics help summarize and describe data providing an overview of social trends, inferential statistics enable students to make prediction or generalization about a population based on sample as such we requested Dr. Mohsin Islam of Mathematics department of Vidyasagar Metropolitan College to take few of our statistics classes as because it will enable students to develop analytical skills and interpret data effectively. Students had highly benefited from his lecture.
